Abstract

A thickener which is superior in handling characteristics and blending stability and has a high thickening action is provided, comprising a fatty acid alkanolamide represented by the general formula (1) and a surfactant composition comprising the thickener and at least one surfactant:

$$\begin{array}{c|cccc}
O & R^{2} \\
\parallel & | & \\
R^{1} - C - NH - C - CH_{2}O(AO)_{n}H & (1) \\
& & \\
R^{3}
\end{array}$$

wherein R^1 represents a straight-chain or branched alkyl or alkenyl group having 5 to 21 carbon atoms which may be substituted with at least one hydroxy group, R^2 and R^3 independently represent an alkyl group having 1 to 2 carbon atoms, AO represents an oxyalkylene group having 2 to 4 carbon atoms and n denotes a number of 0 to 10 in average.
